Claims 1-14 are pending in this application.

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 14 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 14 provides for the use of a combination, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 14 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Laurent et al. (US 2002/0046431 A1) in view of Jacquet et al. (US '4,381,919).

Laurent et al. (US' 431 A1) teaches a hair dyeing composition comprising oxidation dyes as claimed in claim 1 (see page 13, paragraph, 0312), 0.2 to 40% of fatty alcohol alkoxylates such as stearyl alcohol having 20 EO as claimed in claims 1, 6 and 9 (see page 9, paragraphs, 0221-0244 and page 10, paragraph, 0251), alkanolamine derivatives and coconut acid monisopropanolamide in the amount of 4% as claimed in claim 1 (see page 21, paragraph, 0472 and page 22, paragraph, 0493). Laurent et al. (US' 431 A1) teaches also a method for make dyeing composition similar to those claimed by mixing the dyeing ingredients of the composition as described above and as claimed in claim 14 (see page 22, paragraph, 0494).

The instant claims differ from the reference by reciting the weight ratio of the dyeing ingredients. Further, the reference does not teach the claimed species of fatty alcohol and fatty amides as claimed.

However, Laurent et al. suggests the use of fatty amides and fatty alcohols in the dyeing composition (see page 22, paragraph, 0493).

Jacquet et al. (US' 919) in analogous art of hair dyeing formulation, teaches a composition comprising cetyl alcohol and mono or di-ethanolamides derived from lauric acid as claimed (see col. 7, line 6 and lines 40-46).

Therefore, in view of the teaching of the secondary reference, one having ordinary skill in the art at the time the invention was made would be motivated to modify the dyeing composition of Laurent et al. (US' 431 A1) by incorporating cetyl fatty alcohol and fatty amides as taught by Jacquet et al. (US' 919) to arrive at the claimed invention because Laurent et al. (US' 431 A1) as

a primary reference suggests the use of fatty alcohol such as oley alcohol and fatty amides in the dyeing composition. Jacquet et al. (US' 919) as a secondary reference clearly teaches the claimed species cetyl alcohol and monoethanolamide of lauric acid, and, thus a person of the ordinary skill in the art would be motivated to incorporate the fatty amides and fatty alcohols in the dyeing composition of Laurent et al. and would expect such a composition to have similar properties to those claimed, absent unexpected results.

With respect to the claimed ratios of the dyeing ingredients, it would have been obvious to one having ordinary skill in the art at the time the invention was made to formulate a dyeing composition comprising oxidation dyes and/or direct dyes, fatty alcohols, alkanolamides and alkoxylated fatty alcohols with the weight ratio as claimed to arrive at the claimed invention because the combination of the references, suggest the use of these dyeing ingredients in the dyeing composition in the amounts that overlapped with the claimed ranges and, thus, a person of the ordinary skill in the art would be motivated to optimize the amounts of the dyeing ingredients in the composition in order to get the maximum effective amounts of these ingredients and would expect such a composition to have similar properties to those claimed, absent unexpected results.

Further, applicants have not shown on record the criticality of the claimed ratios between the dyeing ingredients in the claimed composition over the compositions of the prior art of record.

Conclusion

The references listed on from PTO-1449 have been reviewed by the examiner and are considered to be cumulative to or less material than the prior art references relied upon in

Art Unit: 1796

the rejection above.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eisa B. Elhilo whose telephone number is (571) 272-1315. The examiner can normally be reached on M - F (8:00 -4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Pyon Harold can be reached on (571) 272-1498. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
